Confidential · For Authorized Recipients Only

What is FIFTO?

FIFTO is a **rules-based intraday option selling system** built on NIFTY weekly options. It identifies high-probability price zones where the market is likely to reverse or stall, and sells option premium at those zones — capturing time decay and mean reversion with a disciplined, fully mechanical exit framework.

Seven independent strategies — each named after a Marvel Avenger — operate across different price zones. Every agent has precise zone-based triggers, a fixed 30% profit target, and an automated trailing stop-loss. **Human judgement is removed from the execution loop.**

Five Core Principles

1. Zone-First: Never sell blindly. Every trade requires spot price to be at a defined technical zone computed from previous-day data. No discretionary entries.

2. Premium Sell Only: All trades are option SELL (short premium). We collect theta decay, not pay it. CE sell on bearish setups. PE sell on bullish reversals.

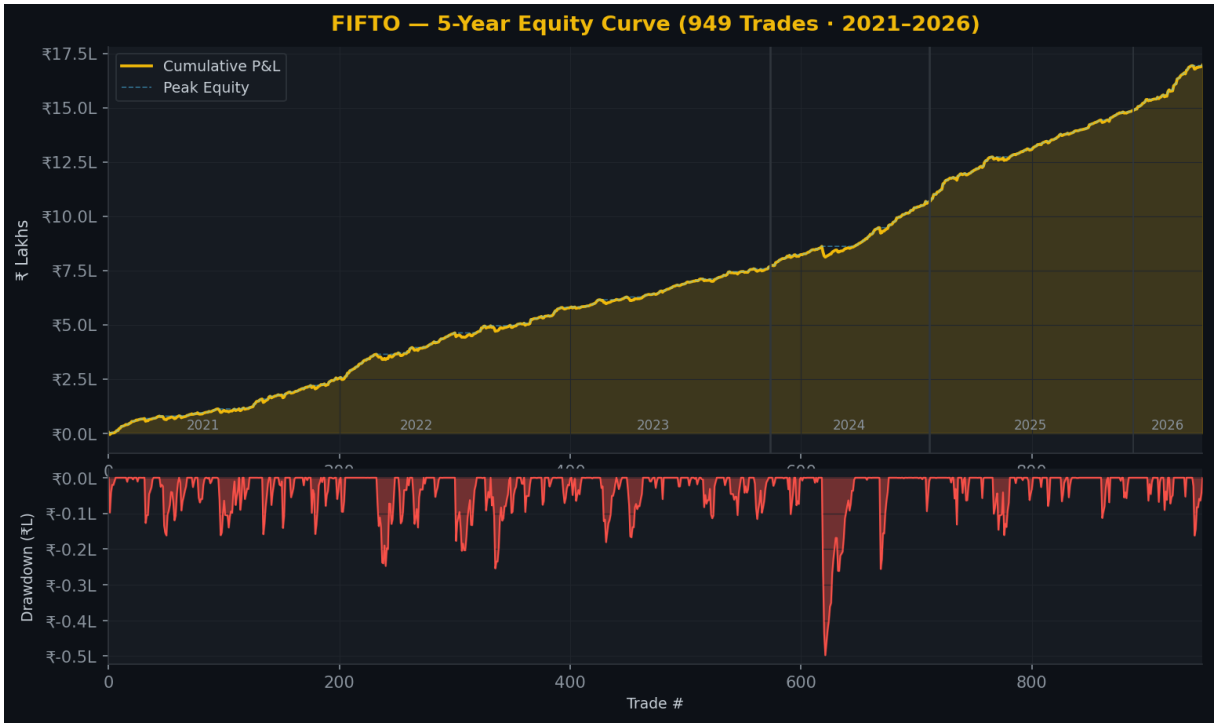
3. Mechanical Exit: Target = 30% of entry premium. Trailing SL activates automatically at defined milestones. No manual intervention once trade is active.

4. One Trade Per Day: Maximum one active position at a time. No averaging, no doubling down, no revenge trading. Capital is protected by design.

5. Capital Safety First: Hard SL = 100% of entry premium. Negative months in 5 years: only 3 out of 58. Maximum drawdown: 2.93% of peak equity.

Performance Equity Curve — 2021 to 2026

TOTAL P&L;	Rs. 16,96,299
WIN RATE	74.5%
TRADES	949
MONTHS	58 (3 negative)
MAX DRAWDOWN	Rs. 46,134 (2.93%)
AVG/MONTH	Rs. 29,247



Equity grows consistently from 2021 to 2026. Maximum drawdown of Rs. 46,134 occurred July 2024 and recovered within 6 weeks. Zero back-to-back loss months in 5 years.

The Seven Agents — Overview

FIFTO deploys seven specialized agents — each targeting a distinct price zone. Base agents (THOR, HULK, IRON MAN, CAPTAIN) trade on **base days**. SPIDER-MAN and BLACK WIDOW activate on **blank days** when no base signal fires. HAWKEYE re-enters after any base agent hits target before 13:30.

	Agent	Zone	Opt	Lots	WR	5yr P&L	Type
	THOR	TC–PDH / R1–R2	PE	1–3	74.1%	Rs.8,56,859	Base
	HULK	PDH–R1 (CAM L3)	PE	1–3	88.5%	Rs.1,33,188	Base
	IRON MAN	R1 / R2 / CAM H3	PE/CE	1–3	73.0%	Rs.1,43,107	Base
	CAPTAIN	PDL / R1 / R2 (IV2)	CE/PE	1	60.9%	Rs.18,561	Base
	SPIDER-MAN	TC / R1 Sweep Trap	CE	1	69.9%	Rs.74,935	Blank
	BLACK WIDOW	I_382 Fibonacci	PE	2	80.6%	Rs.3,07,346	Blank
	HAWKEYE	Post-target Re-entry	Same	1	71.4%	Rs.1,62,302	Re-entry

Base Days: THOR/HULK/IRON MAN/CAPTAIN active + HAWKEYE (if target before 13:30). Blank Days: SPIDER-MAN and BLACK WIDOW active. Coverage: 65.2% of 1,155 trading days.

THOR

The Zone Destroyer · v17a Strategy

Base Agent

Strikes from above — sells PE when price occupies the key selling zones identified through CPR and pivot analysis.

Zone	TC to PDH / R1 to R2 / CPR Interior zones
Trade	PE Sell (bearish price zone bias)
Days	Base Days only
Lots	Score-based: 1–3 lots (conviction scoring framework)

Performance Insight: THOR is the highest-contribution agent — 309 trades and Rs.8.57L P&L; over 5 years. The zone classification produces 16 distinct configurations based on where the day's open falls relative to CPR and pivot levels. EMA bias confirms direction.

Risk Note: Hard SL rate 10.4% — managed by conviction score (low-score days get 1 lot only).

TRADES (5yr)	
WIN RATE	74
5yr P&L;	Rs.856
AVG PER TRADE	Rs.2
TARGET EXITS	58
HARD SL RATE	10

THOR Rules & Filters

1. All zones computed from previous day OHLC before market open — zero forward bias.
2. EMA (20-day) confirms directional bias at market open.
3. Entry strictly at next candle open + 2 seconds after signal.
4. Score filter: low-conviction days reduce lot size to minimum.
5. PE sell filtered when futures basis is 50–100 pts (adverse premium structure).
6. Maximum 1 THOR trade per day.

HULK

The Breakdown Hammer · cam_l3 Strategy

Base Agent

Smashes from the Camarilla L3 zone — sells PE when price rallies into the PDH-to-R1 resistance channel.

Zone	PDH to R1 (Camarilla L3 level)
Trade	PE Sell
Days	Base Days only
Lots	Score-based: 1–3 lots

Performance Insight: HULK is the highest win-rate base agent at 88.5%, with 84.6% of trades exiting at target. The Camarilla L3 level provides a mathematically precise resistance zone derived from previous-day range and close.

Risk Note: Hard SL rate 7.7% — among the lowest of base agents.

TRADES (5yr)	
WIN RATE	88
5yr P&L;	Rs.133
AVG PER TRADE	Rs.2
TARGET EXITS	84
HARD SL RATE	7

HULK Rules & Filters

1. CAM L3 level computed from previous day High, Low, Close before market open.
2. Price must rally into the zone, not gap through it.
3. Confirmation via multi-timeframe alignment before entry.
4. Score of at least 2 confluence features required for standard lot size.
5. Entry: next candle + 2 seconds after signal confirmation.
6. Maximum 1 HULK trade per day.

IRON MAN

The Precision Sniper · cam_h3 / iv2_r1 / iv2_r2

Base Agent

High-precision targeting at upper resistance — sells PE at R1, R2, and CAM H3 levels where supply is concentrated.

Zone	R1 / R2 / CAM H3 (upper resistance band)
Trade	PE Sell (at resistance) · CE Sell (breakdown zones)
Days	Base Days only
Lots	Score-based: 1–3 lots

Performance Insight: IRON MAN covers three critical upper resistance levels. The cam_h3+tc_to_pdh combination is explicitly excluded — a structural mismatch identified in backtesting where the combination produced adverse risk-reward.

Risk Note: Hard SL rate 3.2% — lowest of all base agents at resistance levels.

TRADES (5yr)	
WIN RATE	73
5yr P&L;	Rs.143
AVG PER TRADE	Rs.2
TARGET EXITS	47
HARD SL RATE	3

IRON MAN Rules & Filters

1. R1 = 2×Pivot – Previous Day Low. R2 = Pivot + Previous Day Range.
2. CAM H3 = Previous Day Close + Range × 0.275.
3. cam_h3 + tc_to_pdh zone combination is excluded (structural conflict).
4. Futures basis must be within acceptable range for PE sells.
5. Score-based lot sizing applies — no trade below minimum conviction.
6. Entry: next candle open + 2 seconds.

CAPTAIN

The Reliable Soldier · iv2_pdl Strategy

Base Agent

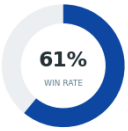
Consistent and disciplined — level-based entries at PDL zone. One lot, every time. No exceptions.

Zone	Previous Day Low (PDL)
Trade	CE Sell (at PDL breakdown)
Days	Base Days only
Lots	Fixed: 1 lot always

Performance Insight: CAPTAIN targets the Previous Day Low — a key support-turned-resistance level. With 23 trades and Rs.18,561 P&L;, this is the smallest-volume agent. It fires only when price touches the PDL with iv2 pattern confirmation. No conviction scoring — always 1 lot.

Risk Note: Hard SL rate 0.0% — no hard stop hits in 5 years of backtest.

TRADES (5yr)	
WIN RATE	61
5yr P&L;	Rs.18
AVG PER TRADE	Rs
TARGET EXITS	56
HARD SL RATE	0



CAPTAIN Rules & Filters

1. PDL = Previous Day Low (fixed level, computed pre-market).
2. iv2 pattern confirmation required at PDL level.
3. Entry between 09:16 and 15:15 only.
4. Fixed 1-lot position — no conviction score adjustment.
5. No re-entry if CAPTAIN has already traded today.
6. EOD exit at 15:20 if target not reached.

SPIDER-MAN

The Web Trap · CRT (Candle Range Theory)

Blank Day Agent

Sets the trap — price sweeps above TC or R1, lures bulls, then snaps back below. CE sell on the reversal.

Zone	TC / R1 (sweep-and-reverse pattern)
Trade	CE Sell (bearish reversal after liquidity sweep)
Days	Blank Days only (no base signal that day)
Lots	Fixed: 1 lot

Performance Insight: The CRT pattern is a 3-candle trap structure on the 15-minute chart, confirmed by a 5-minute Heiken Ashi setup. It identifies false breakout moves above key resistance where institutions sweep retail stop-losses before reversing.

Risk Note: Hard SL rate 3.7% — IB filter eliminates most adverse entries.

TRADES (5yr)	
WIN RATE	70
5yr P&L;	Rs.74
AVG PER TRADE	Rs
TARGET EXITS	63
HARD SL RATE	3

SPIDER-MAN Rules & Filters

1. Only fires on blank days when base agents (THOR/HULK/IRON MAN/CAPTAIN) have not signaled.
2. 15-minute and 5-minute multi-timeframe confirmation required.
3. IB filter: if Initial Balance (09:15–09:45) already expanded up before entry → SKIP.
4. Futures basis filter: –50 to +100 pts range required.
5. Signal must be confirmed before 12:00 PM.
6. Fixed 1-lot position.

BLACK WIDOW

The Silent Reversal · MRC (Mean Reversion Concept)

Blank Day Agent

Strikes from the shadows — PE sell when market bounces off the 38.2% Fibonacci retracement of previous-day range.

Zone	l_382 = PDH – Range × 0.382 (Fibonacci mean reversion zone
Trade	PE Sell (bullish reversal at Fibonacci support)
Days	Blank Days only (no base signal that day)
Lots	Fixed: 2 lots (WR 80.6% justifies double position size)

TRADES (5yr)	
WIN RATE	81
5yr P&L;	Rs.307
AVG PER TRADE	Rs.1
TARGET EXITS	74
HARD SL RATE	4

Performance Insight: BLACK WIDOW is the highest win-rate agent in the system at 80.6%. The Fibonacci l_382 level is a precise mean-reversion zone where institutions accumulate long positions. The 2-lot sizing was approved after rigorous risk analysis: hard SL rate 4.7%, worst 2-lot loss Rs.11,297, max drawdown unchanged.

Risk Note: Hard SL rate 4.7% (8 hard SLs in 170 trades). MRC CE trades permanently excluded — net negative over 5 years.

BLACK WIDOW Rules & Filters

1. Only fires on blank days when no base agent has signaled.
2. Previous day range must exceed 50 points (volatility filter).
3. 5-minute Heiken Ashi confirmation required at l_382 zone.
4. Signal window: 09:15 to 12:00 PM only.
5. MRC CE (below l_618) trades are permanently excluded.
6. Fixed 2-lot position — approved on WR ≥ 75% threshold.

HAWKEYE

The Precision Re-entry · S4 Second Trade

Re-entry Agent

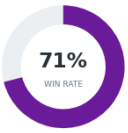
Never misses the second shot — re-enters in the same direction after the base trade hits target, on a defined pullback.

Zone	Same as triggering base agent (post-target pullback level)
Trade	Same as base trade (CE or PE)
Days	Base Days only (after base agent hits 30% target)
Lots	Fixed: 1 lot

Performance Insight: HAWKEYE activates only when a base agent hits the 30% target before 13:30, then waits for the option premium to pull back to 60–75% of original entry. This captures the continuation move in the same direction. 196 trades, 71.4% WR, Rs.1.62L contribution.

Risk Note: Hard SL rate 7.1% — acceptable given the second-trade continuation nature.

TRADES (5yr)	
WIN RATE	71
5yr P&L;	Rs.162
AVG PER TRADE	Rs
TARGET EXITS	62
HARD SL RATE	7



HAWKEYE Rules & Filters

1. Triggers only when a base agent exits with 'target' reason before 13:30.
2. Wait for option premium to pull back to 60–75% of original entry price.
3. Re-entry in same direction as original base trade.
4. Only 1 HAWKEYE re-entry per day.
5. Fixed 1-lot — no conviction score adjustment for re-entries.
6. EOD exit at 15:20 if target not reached.

Universal Entry Rules

No Forward Bias

All technical levels (CPR, Camarilla, Fibonacci, PDH/PDL, Pivot R1/R2) are computed from **previous day data** before market opens at 08:55 AM. Zero current-day or future data is used at any stage.

Entry Timing

Every entry is: **next candle open + 2 seconds** after signal confirmation. This prevents entering on the signal candle itself. Intraday window: 09:16 to 15:15.

IB Filter (SPIDER-MAN)

Initial Balance = NIFTY spot range from 09:15 to 09:45. If IB has already expanded **upward** before the entry time, SPIDER-MAN CE sell is skipped — selling into a confirmed uptrend is adverse.

Futures Basis Filter

Futures basis = Futures LTP – Spot LTP at 09:15. SPIDER-MAN: basis must be –50 to +100 pts. Base PE sells (THOR/HULK): skipped when basis is 50–100 pts (strong bull premium).

Blank Day Logic

SPIDER-MAN and BLACK WIDOW **only trade on blank days** — days when no base agent (THOR/HULK/IRON MAN/CAPTAIN) fires a signal. On base-agent days, only the base agent and HAWKEYE are eligible.

Sequential Only

One active position at a time. A new signal is only considered **after the current trade exits** completely. Exception: HAWKEYE can activate after base agent exits at target.

Pre-Market Calculation

At 08:55 AM each day: fetch 45-day daily OHLC → compute EMA(20), CPR, Camarilla, Fibonacci, Pivot levels. Score7 conviction features computed. Day plan is locked before 09:15.

Universal Exit Rules

All agents share the same exit framework. Once a position is open, the rules below execute mechanically — no human override at any stage.

Exit Type	Trigger Condition	Typical P&L	Frequency
TARGET	Option price falls 30% from entry (ep × 0.70)	Rs.+1,500–6,000	63.5%
TRAIL SL — BE	Price declines 25% from entry → SL = entry	Rs. ~0	Part of 9%
TRAIL SL — Lock20	Price declines 40% from entry → SL = 80% ep	Rs.+300–1,500	Part of 9%
TRAIL SL — Ride	Price declines 60%+ → SL trails at 95% of max	Rs.+large	Part of 9%
EOD EXIT	Time ≥ 15:20:00 — force close regardless	Rs. ±variable	20.7%
HARD SL	Option price doubles (ep × 2.0) — immediate exit	Rs.–4K to –17K	6.8%

Trailing Stop-Loss Mechanics

Entry = Rs.100	Sell 1 CE or PE at Rs.100
Target = Rs.70	Price falls to Rs.70 → exit, profit = Rs.30 per unit
Trail 1: decline 25%	Price falls to Rs.75 → SL moves to Rs.100 (breakeven locked)
Trail 2: decline 40%	Price falls to Rs.60 → SL moves to Rs.80 (20% locked)
Trail 3: decline 60%	Price falls to Rs.40 → SL trails at 95% of max gain
Hard SL = Rs.200	Price rises to Rs.200 → immediate exit, full loss capped

5-year exit distribution: Target 63.5% · Trail SL 9.0% · EOD 20.7% · Hard SL 6.8%

Conviction Scoring — Lot Sizing Framework

For base agents (THOR, HULK, IRON MAN, CAPTAIN), position size is determined by a **7-feature conviction score** computed from previous-day data. Higher conviction = more lots = amplified P&L; when the trade is correct.

Feature	Condition for 1 Point	Why It Matters
VIX OK	India VIX < 20-day MA of VIX	Low fear environment favors premium sellers
CPR Trend	Prev close on correct side of CPR	Prior day momentum confirms direction
Consecutive	2 consecutive days close aligned	Multi-day momentum adds conviction
Gap Aligned	Today's open gaps in trade direction	Gap = strong institutional intent
DTE Sweet Spot	Days to expiry: 3 to 5	Theta acceleration zone — max time decay
CPR Narrow	CPR width 0.10%–0.20% of spot	Narrow CPR signals trending day
CPR Directional	CPR midpoint trending in trade direction	Macro CPR slope confirms setup

Score to Lot Size Mapping

Score	Base Lots	Inside CPR?	Final Lots	Meaning
0 – 1	1	Any	1	Low conviction — minimum exposure
2 – 3	2	No	2	Moderate conviction — standard size
2 – 3	2	Yes	1	Inside CPR penalty (–1 lot)
4 – 7	3	No	3	High conviction — full position
4 – 7	3	Yes	2	Inside CPR reduces to 2
Score = 6	—	—	**SKIP**	Score==6 excluded (historically adverse)
BLACK WIDOW	2	N/A	2	Fixed 2-lot — WR 80.6% justifies
SPIDER-MAN	1	N/A	1	Fixed 1-lot
HAWKEYE	1	N/A	1	Fixed 1-lot

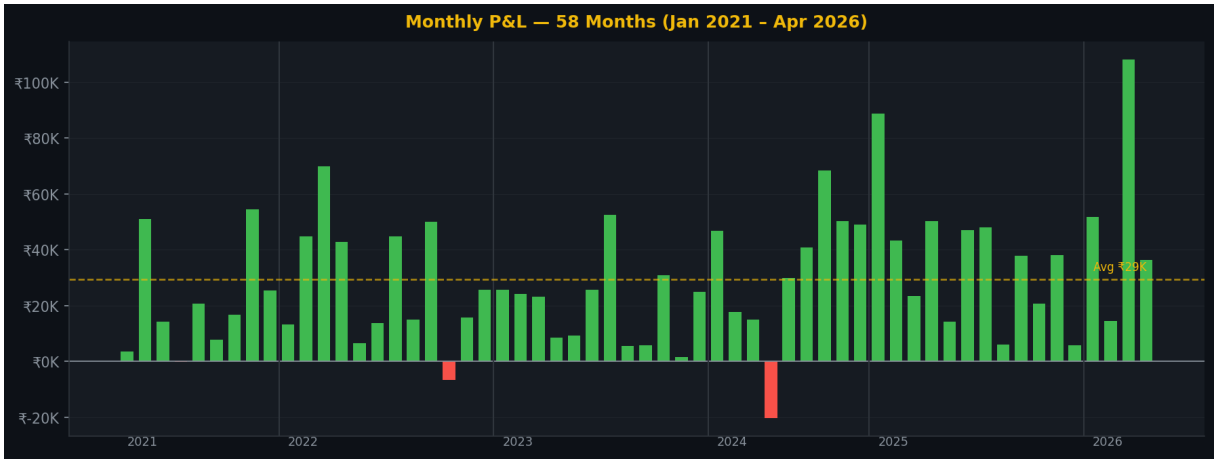
Detailed Performance — 5-Year Breakdown

Year-wise Performance

Year	Trades	Win Rate	Total P&L (Rs.)	Avg/Trade (Rs.)	vs Prior Year
2021	164	73.0%	193,434	1,179	
2022	207	70.0%	334,964	1,618	+73%
2023	202	72.0%	237,289	1,175	-29%
2024	138	77.0%	297,082	2,153	+25%
2025	177	81.0%	423,023	2,390	+42%
2026 *	61	77.0%	210,506	3,451	-50%
TOTAL	**949**	**74.5%**	**16,96,299**	**1,788**	**5yr compound**

* 2026 partial year — January through April only.

Monthly P&L; — All 58 Months



Green = positive month · Red = negative month · Gold dashed = monthly average (Rs.29,247). Negative months: 3 of 58 (5.2%)

Metric	Value
Total months	58
Positive months	55 (94.8%)
Negative months	3 (5.2%)
Average monthly P&L	Rs. 29,247
Best month	Rs. 1,08,030 (March 2026)
Worst month	Rs. –20,326 (July 2024)
Months > Rs.50,000	18 (31%)

Risk Management

Capital Requirements

Parameter	Value	Notes
Minimum capital	Rs. 5,00,000	For 1-lot base trades with adequate margin buffer
Margin per lot	Rs. ~50,000	NIFTY ATM option sell margin (approximate)
Max lots at once	3 lots	High-conviction base trades only
Max daily risk	Rs. ~17,000	1 hard SL on a 3-lot base trade
Monthly avg P&L	Rs. 29,247	58-month trailing average
Negative months	3 / 58	5.2% of months — extremely low
Worst single month	Rs. –20,326	July 2024 — 2 hard SL same week
Best single month	Rs. 1,08,030	March 2026
Return on capital	~33.9% annualized	Based on Rs.5L capital, 5yr avg Rs.1.70L/yr

Risk Control Mechanisms

Hard SL at 2×: Option can never lose more than 100% of entry premium. Maximum total loss on any single trade is capped.

1 Trade Per Day: A bad day impacts only 1 trade. No compounding of intraday losses. Capital protected by design.

Score Filter: Low-conviction days trade 1 lot — limiting daily risk exposure automatically.

Basis Filter: PE sells skipped when futures basis 50–100 pts. Avoids adverse premium structure.

IB Filter: CRT CE skipped if IB already expanded upward — avoids selling into confirmed uptrend.

Blank Day Split: Base agents and blank agents never overlap. Risk per day is always 1 strategy's single trade.

EOD Forced Exit: No overnight holding. Fresh slate every day. No gap risk.

Drawdown Profile

Metric	Value
Maximum Drawdown	Rs. 46,134 (2.93% of peak equity)
Worst DD Period	Jul 15–24, 2024 — 4 trades, 2 hard SL in same week
Recovery Time	Under 2 months in all DD episodes
DD > 5% of equity	0 occurrences in 5 years
Consecutive losses	Max 5 in a row (isolated to volatile weeks only)

DD > Rs.1,00,000	0 occurrences — hard cap from lot-size limits

Paper Trading Plan — Getting Started

Before going live, FIFTO recommends a **30-day paper trading phase** to validate signal detection, entry timing, and exit execution against live market data. Results are automatically logged to CSV — compare with backtest to confirm live-to-backtest alignment (expected: WR within ±5%, avg P&L; within ±20%).

Daily Operational Routine

08:55 AM	Connect broker API. Fetch 45-day NIFTY daily OHLC. Compute all levels: CPR, Camarilla, MRC Fibonacci, E
09:10 AM	Print day summary: TC, BC, R1, R2, CAM L3/H3, MRC l_382, l_618, nearest expiry, score7 conviction featur
09:15 AM	Market open. Start real-time NIFTY spot WebSocket. IB tracking begins (tracks 09:15–09:45 range).
09:16 AM	Base agents (THOR/HULK/IRON MAN/CAPTAIN) go active. Monitor for zone entry signals.
09:46 AM	IB confirmed. SPIDER-MAN and BLACK WIDOW scanners activate (blank days only).
On signal	Fetch ATM option LTP. Log paper entry. Start option tick monitoring with automated trade manager.
During trade	Trailing SL updates on every tick — fully automated. No manual action required.
15:20 PM	Force EOD exit if still in trade. Log result to CSV.
15:30 PM	Print daily P&L summary. Compare with backtest benchmark.

Angel One SmartAPI — Data Requirements

When	What	API Method	Used For
08:55 AM	45-day NIFTY OHLC	getCandleData (ONE_DAY)	CPR, EMA20, PDH/PDL
09:15 AM	Futures LTP	ltpData()	Futures basis filter
09:15–15:20	NIFTY spot ticks	WebSocket (token 26000)	IB, 5M/15M candles
On signal	ATM option LTP	ltpData(NFO)	Entry price capture
On signal	Option ticks	WebSocket (NFO token)	SL/target monitoring
Pre-market	Instrument master	ScripMaster JSON	Option token lookup

Quick Reference Card

	Agent	Zone	Opt	Lots	WR	5yr P&L	Day Type
T	THOR	TC–PDH / R1–R2	PE	1–3	74.0%	Rs.856,859	Base
H	HULK	PDH–R1 (CAM L3)	PE	1–3	88.0%	Rs.133,188	Base
I	IRON MAN	R1 / R2 / CAM H3	PE/CE	1–3	73.0%	Rs.143,107	Base
C	CAPTAIN	PDL (IV2)	CE	1	61.0%	Rs.18,561	Base
S	SPIDER-MAN	TC / R1 sweep	CE	1	70.0%	Rs.74,935	Blank
W	BLACK WIDOW	I_382 Fibonacci	PE	2	81.0%	Rs.307,346	Blank
H	HAWKEYE	Post-target re-entry	Same	1	71.0%	Rs.162,302	Base

Exit Cheat Sheet

Trigger	Action	Result
ep × 0.70	EXIT — Target hit	+30% of entry premium
Max decline ≥ 25%	Move SL to entry price	Breakeven locked
Max decline ≥ 40%	Move SL to ep × 0.80	20% gain locked
Max decline ≥ 60%	Trail SL at 95% of decline	Maximum profit locked
ep × 2.0 (price doubles)	EXIT — Hard SL	100% loss on entry
Time ≥ 15:20:00	EXIT — EOD forced exit	Whatever P&L is at 15:20

FIFTO v1.0 · 5-Year Backtest: 2021–2026 · 949 Trades · NIFTY Weekly Options · Zero forward look-ahead bias verified
