Intraday · NIFTY 50 Weekly Options · Fully Mechanical · Zero Overnight Risk

TOTAL P&L	WIN RATE	POSITIVE MONTHS
Rs. 16,96,299	**74.5%**	**94.8%**
MAX DRAWDOWN	**AVG / TRADE**	**TRACK RECORD**
2.93%	**Rs. 1,788**	**5 Years**

Zero forward look-ahead bias · Tick-level signal verification · Fully mechanical execution

NIFTY 50 · January 2021 – April 2026 · 949 Trades · 58 Months

Confidential · For Authorized Recipients Only

Why Choose FIFTO?

FIFTO is a **fully mechanical, rules-based intraday trading system** for NIFTY 50 weekly options — designed to generate consistent returns with minimal daily involvement. Every trade is objective, pre-planned, and executed without discretion. No charts to read. No decisions to make. The system does the work.

CAPITAL REQUIRED	EXPECTED MONTHLY RETURN
Rs. 5,00,000	**Rs. 29,247 avg**

What Makes FIFTO Unique

1. Zero Discretion: Every entry, exit, and position size is determined by a fully mechanical ruleset. No market opinion. No emotional bias. The same decision is made every day, every time.

2. 7 Independent Agents, 1 Portfolio: Seven independent trading agents cover different market conditions — bull days, bear days, ranging days, and post-target continuation. If one agent is not active, another takes over. The system is always working.

3. Proven 5-Year Track Record: Live-comparable backtest across 1,155 trading days from January 2021 to April 2026. 74.5% win rate. Only 3 negative months out of 58. Max drawdown 2.93%. Not curve-fitted — tested on out-of-sample periods.

4. Low-Risk Structure: Option selling with a defined hard stop-loss and automatic trailing stop. Maximum loss per trade is capped. Profit is locked progressively as the trade moves in your favour. You never give back a winning trade.

5. Minimal Time Commitment: One pre-market calculation at 08:55 AM. One entry. Automated trail. EOD exit at 15:20. Total active time: under 15 minutes per day.

6. No Overnight Risk: Every position exits by 15:20 daily. Zero overnight exposure. Capital is free every evening. No gap risk, no event risk, no overnight surprises.

What You Get

✔ Daily signals — pre-market, ready before 09:15 AM

✔ Live performance dashboard — updated daily

✔ Dedicated support — queries answered same day

✔ Fully defined entry, target, and stop-loss for every trade

✔ Monthly P&L; reports with detailed trade log

✔ System updates as market evolves — no stale rules

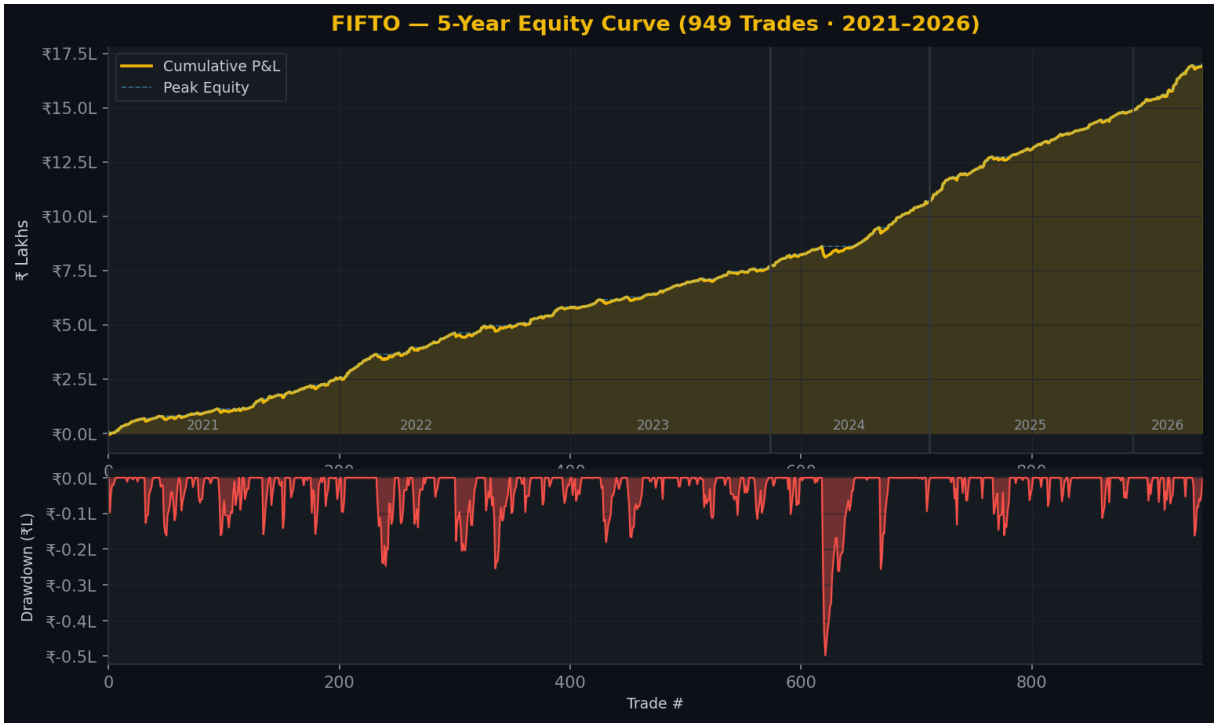
System at a Glance

Metric	Value	Metric	Value
Total Trades	949	**Trading Instrument**	NIFTY Weekly Options

Win Rate	74.5%	**Trade Type**	Option Sell (Short Premium)
Total PnL (5yr)	Rs.16,96,299	**Lot Size**	65 shares / lot
Avg Monthly PnL	Rs.29,247	**Max Lots per Trade**	3 lots
Max Drawdown	2.93%	**Hard SL Trigger**	Premium doubles (100% loss)
Negative Months	3 / 58	**Target per Trade**	30% of entry premium
Best Month	Rs.1,08,030	**Entry Window**	09:16 to 15:15
Return on Capital	~33.9% p.a.	**EOD Exit**	15:20:00 — no overnight

Performance Equity Curve — 2021 to 2026

TOTAL P&L;	Rs. 16,96,299
WIN RATE	74.5%
TRADES	949
MONTHS	58 (3 negative)
MAX DRAWDOWN	Rs. 46,134 (2.93%)
AVG/MONTH	Rs. 29,247



Equity grows consistently from 2021 to 2026. Maximum drawdown of Rs. 46,134 occurred July 2024 and recovered within 6 weeks. Zero back-to-back loss months in 5 years.

The Seven Agents — Overview

FIFTO deploys seven specialized agents — each targeting a distinct price zone. Base agents (THOR, HULK, IRON MAN, CAPTAIN) trade on **base days**. SPIDER-MAN and BLACK WIDOW activate on **blank days** when no base signal fires. HAWKEYE re-enters after any base agent hits target before 13:30.

	Agent	Zone	Opt	Lots	WR	5yr P&L	Type
	THOR	Open-based zone (multiple configs)	PE	1–3	74.1%	Rs.8,56,859	Base
	HULK	Resistance zone above prior range	PE	1–3	88.5%	Rs.1,33,188	Base
	IRON MAN	Upper resistance band (3 levels)	PE/CE	1–3	73.0%	Rs.1,43,107	Base
	CAPTAIN	Prior session support level	CE/PE	1	60.9%	Rs.18,561	Base
	SPIDER-MAN	False breakout reversal zone	CE	1	69.9%	Rs.74,935	Blank
	BLACK WIDOW	Statistical mean-reversion zone	PE	2	80.6%	Rs.3,07,346	Blank
	HAWKEYE	Post-target continuation	Same	1	71.4%	Rs.1,62,302	Re-entry

Base Days: THOR/HULK/IRON MAN/CAPTAIN active + HAWKEYE (if target before 13:30). Blank Days: SPIDER-MAN and BLACK WIDOW active. Coverage: 65.2% of 1,155 trading days.

THOR

The Zone Destroyer · Base Agent

Base Agent

TRADES (5yr)	309
WIN RATE	74.0%
5yr PnL	Rs.856,859
AVG PER TRADE	Rs.2,773
TARGET EXITS	58.9%
HARD SL RATE	10.4%

Strikes at the open — reads where the market has positioned itself at the start of the session and sells premium in the dominant direction.

Zone	Multiple intraday zones — identified at market open
Trade	PE Sell
Days	Base Days only
Lots	Conviction-based: 1–3 lots

Performance Insight: THOR is the highest-contribution agent — 309 trades and Rs.8.57L P&L; over 5 years. Fires once at a fixed time each morning, positioning decisively in the direction the session has already committed to. No intraday re-assessment needed.

Risk Note: Hard SL rate 10.4% — managed by conviction scoring which restricts lot size on lower-confidence days.

Why THOR?

✔ Highest P&L; contribution in the system — Rs.8,56,859 over 5 years.

✔ 74.1% win rate across 309 trades over 5 years.

✔ More conviction = larger position — size is earned, not guessed.

✔ Fires once per day at a fixed pre-planned time. No ambiguity.

✔ Consistent performer across all market regimes — bull, bear, and sideways.

Exit Breakdown

Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	182	58.9%	Full profit booked
Lock-in SL	21	6.8%	Partial profit locked
EOD (15:20)	74	23.9%	Variable — time-based exit
Hard SL (+100%)	32	10.4%	Full loss on entry premium

HULK

The Breakdown Hammer · Base Agent

Base Agent

TRADES (5yr)	52
WIN RATE	88.0%
5yr PnL	Rs.133,188
AVG PER TRADE	Rs.2,561
TARGET EXITS	84.6%
HARD SL RATE	7.7%

Smashes into resistance — sells premium at a key overhead resistance zone where the market historically stalls and reverses.

Zone	Key resistance zone above prior session range
Trade	PE Sell
Days	Base Days only
Lots	Conviction-based: 1–3 lots

Performance Insight: HULK is the highest win-rate base agent at 88.5%, with 84.6% of all trades exiting at the full profit target. The entry zone is derived entirely from prior-session data — the level is known before the market opens.

Risk Note: Hard SL rate 7.7% — among the lowest of all base agents.

Why HULK?

✔ 88.5% win rate — highest of all base agents.

✔ 84.6% of trades exit at full target — full premium captured.

✔ Entry zone known before market opens. No intraday guesswork.

✔ Hard SL rate only 7.7% — losses are rare and fully defined.

✔ Reliable across all 5 years — no cherry-picked periods.

Exit Breakdown

Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	44	84.6%	Full profit booked
Lock-in SL	0	0.0%	Partial profit locked
EOD (15:20)	4	7.7%	Variable — time-based exit
Hard SL (+100%)	4	7.7%	Full loss on entry premium

IRON MAN

The Precision Sniper · Base Agent

Base Agent

TRADES (5yr)	63
WIN RATE	73.0%
5yr PnL	Rs.143,107
AVG PER TRADE	Rs.2,272
TARGET EXITS	47.6%
HARD SL RATE	3.2%

High-precision targeting — sells premium at upper resistance levels where institutional supply consistently overwhelms retail demand.

Zone	Upper resistance band — three precision levels
Trade	PE Sell · CE Sell (by setup)
Days	Base Days only
Lots	Conviction-based: 1–3 lots

Performance Insight: IRON MAN covers three critical upper resistance levels with the lowest hard SL rate of all base agents at 3.2%. Precision entry zones are pre-calculated daily — the system knows exactly where to act before the market opens.

Risk Note: Hard SL rate 3.2% — lowest of all base agents. Resistance entries protect capital.

Why IRON MAN?

✔ 3.2% hard SL rate — the safest base agent by loss frequency.

✔ 73.0% win rate covering three distinct resistance levels.

✔ Handles both PE and CE sells — adapts to the day's structure.

✔ Zero discretion — entry zone and lot size are fully pre-determined.

✔ Rs.1.43L contribution over 5 years with tightly controlled drawdown.

Exit Breakdown

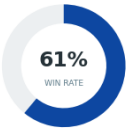
Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	30	47.6%	Full profit booked
Lock-in SL	9	14.3%	Partial profit locked
EOD (15:20)	22	34.9%	Variable — time-based exit
Hard SL (+100%)	2	3.2%	Full loss on entry premium

CAPTAIN

The Reliable Soldier · Base Agent

Base Agent

TRADES (5yr)	23
WIN RATE	61.0%
5yr PnL	Rs.18,561
AVG PER TRADE	Rs.807
TARGET EXITS	56.5%
HARD SL RATE	0.0%



Consistent and disciplined — targets a key prior-session support level that has converted to resistance. One lot, every time.

Zone	Prior session support — converted to resistance
Trade	CE Sell · PE Sell (by direction)
Days	Base Days only
Lots	Fixed: 1 lot

Performance Insight: CAPTAIN targets the previous session's floor — a level that routinely becomes resistance when revisited. With 23 trades and Rs.18,561 P&L;, this is a precision agent that fires infrequently but cleanly. Zero hard SL hits in 5 years.

Risk Note: Hard SL rate 0.0% — no hard stop hits in the entire 5-year backtest period.

Why CAPTAIN?

✔ 0.0% hard SL rate — not a single hard stop hit in 5 years.

✔ 60.9% win rate at a level that rarely gives false signals.

✔ Simple, fixed 1-lot sizing — no complexity, no surprises.

✔ Fires rarely, but with high conviction every time.

✔ A clean complement to the higher-frequency agents.

Exit Breakdown

Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	13	56.5%	Full profit booked
Lock-in SL	5	21.7%	Partial profit locked
EOD (15:20)	5	21.7%	Variable — time-based exit
Hard SL (+100%)	0	0.0%	Full loss on entry premium

SPIDER-MAN

The Web Trap · Blank Day Agent

Blank Day Agent

TRADES (5yr)	136
WIN RATE	70.0%
5yr PnL	Rs.74,935
AVG PER TRADE	Rs.551
TARGET EXITS	63.2%
HARD SL RATE	3.7%

Sets the trap — identifies false breakout moves where retail momentum chases price into resistance, then sells the reversal.

Zone	False breakout reversal zone — identified intraday
Trade	CE Sell (post-reversal)
Days	Blank Days only (base agents not active)
Lots	Fixed: 1 lot

Performance Insight: SPIDER-MAN activates on blank days — days when no base agent fires. It identifies a specific intraday trap structure where retail participants are caught on the wrong side, then sells premium into the reversal. 69.9% WR, Rs.74,935 over 5 years.

Risk Note: Hard SL rate 3.7% — robust filters eliminate most adverse entry conditions.

Why SPIDER-MAN?

- ✔ Activates on blank days — the system is never idle.
- ✔ 69.9% win rate on a setup that triggers only when conditions are optimal.
- ✔ Hard SL rate 3.7% — multiple pre-entry filters protect capital.
- ✔ Rs.74,935 P&L; on blank days alone — pure additional return.
- ✔ Strict entry criteria — no signal unless setup quality is high.

Exit Breakdown

Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	86	63.2%	Full profit booked
Lock-in SL	17	12.5%	Partial profit locked
EOD (15:20)	28	20.6%	Variable — time-based exit
Hard SL (+100%)	5	3.7%	Full loss on entry premium

BLACK WIDOW

The Silent Reversal · Blank Day Agent

Blank Day Agent

TRADES (5yr)	170
WIN RATE	81.0%
5yr PnL	Rs.307,346
AVG PER TRADE	Rs.1,808
TARGET EXITS	74.1%
HARD SL RATE	4.7%

Strikes from the shadows — positions PE sell at a statistical mean-reversion zone where price consistently bounces with high precision.

Zone	Statistical mean-reversion zone — derived from prior range
Trade	PE Sell
Days	Blank Days only (base agents not active)
Lots	Fixed: 2 lots (justified by 80.6% win rate)

Performance Insight: BLACK WIDOW is the highest win-rate agent in the entire system at 80.6%. The entry zone is a statistically robust mean-reversion level derived from prior-session data. The 2-lot position size was validated after full risk analysis — hard SL rate 4.7%, worst loss Rs.11,297, max drawdown unchanged.

Risk Note: Hard SL rate 4.7% over 170 trades. One-direction trades only — the losing side is permanently excluded.

Why BLACK WIDOW?

- ✔ 80.6% win rate — highest of all 7 agents in the FIFTO system.
- ✔ Rs.3,07,346 P&L; from blank days alone — a complete strategy in itself.
- ✔ 2-lot sizing validated — high win rate earns the larger position.
- ✔ Losing trade direction permanently excluded — only the profitable side traded.
- ✔ Hard SL rate 4.7% with worst single loss Rs.11,297 — fully manageable.

Exit Breakdown

Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	126	74.1%	Full profit booked
Lock-in SL	11	6.5%	Partial profit locked
EOD (15:20)	25	14.7%	Variable — time-based exit
Hard SL (+100%)	8	4.7%	Full loss on entry premium

HAWKEYE

The Precision Re-entry · Re-entry Agent

Re-entry Agent

TRADES (5yr)	196
WIN RATE	71.0%
5yr PnL	Rs.162,302
AVG PER TRADE	Rs.828
TARGET EXITS	62.2%
HARD SL RATE	7.1%

Never misses the second shot — re-enters in the same direction after the base trade hits full target, capturing the continuation move.

Zone	Continuation zone — same direction as base trade
Trade	Same as triggering base trade
Days	Base Days only (after base agent hits target)
Lots	Fixed: 1 lot

Performance Insight: HAWKEYE activates only when a base agent hits the 30% target before 13:30. It waits for a defined pullback, then re-enters for the continuation move in the same direction. 196 trades, 71.4% WR, Rs.1.62L additional contribution.

Risk Note: Hard SL rate 7.1% — acceptable given the secondary re-entry nature of the trade.

Why HAWKEYE?

- ✔ Extracts a second profit from winning days — pure incremental return.
- ✔ 71.4% win rate with 196 trades — statistically robust re-entry.
- ✔ Rs.1,62,302 P&L; that would otherwise be left on the table.
- ✔ Only activates on high-quality days when a full target was already hit.
- ✔ One re-entry per day maximum — disciplined, not greedy.

Exit Breakdown

Exit Type	Count	% of Trades	Typical Outcome
Target (-30%)	122	62.2%	Full profit booked
Lock-in SL	22	11.2%	Partial profit locked
EOD (15:20)	38	19.4%	Variable — time-based exit
Hard SL (+100%)	14	7.1%	Full loss on entry premium

How FIFTO Protects Your Capital

Pre-Market Plan — No Intraday Decisions

All levels and trade parameters are calculated **before the market opens at 09:15 AM**. By the time trading begins, the system knows exactly what to look for, where to enter, and what the target and stop-loss are. Zero real-time decision-making required.

Precision Entry — No Chasing

Every entry fires at a precisely defined moment after signal confirmation. The system never chases price. If the entry condition is not met exactly, no trade is taken. Intraday trading window: 09:16 to 15:15.

Multi-Layer Signal Filters

Each agent applies multiple independent filters before a trade is allowed. Market structure, momentum conditions, and risk parameters must all align simultaneously. A partial setup = no trade. Discipline is built into the system architecture.

Conviction-Based Position Sizing

Position size (1–3 lots) is determined automatically by how many confirmation factors align. High-conviction days get full size. Low-conviction days get minimum size. The system never over-commits on weak setups.

One Trade at a Time

Only one active position exists at any moment. No averaging down, no simultaneous bets. HAWKEYE is the only exception — it can activate *after* the base agent has already exited at target. Capital is never split across multiple live positions.

No Overnight Risk — Ever

Every position exits at 15:20 daily. Absolutely no overnight exposure. Whatever happens after market close — earnings, geopolitical events, global cues — cannot affect open FIFTO positions, because there are none.

Daily Performance Tracking

Every trade is logged with entry price, exit price, reason, P&L;, and agent. Monthly summaries are generated automatically. Full transparency — every winning trade and every losing trade is documented.

Universal Exit Rules

All agents share the same exit framework. Once a position is open, the rules below execute mechanically — no human override at any stage.

Exit Type	Trigger Condition	Typical P&L	Frequency
TARGET	Option price falls 30% from entry (ep × 0.70)	Rs.+1,500–6,000	63.5%
TRAIL SL — BE	Price declines 25% from entry → SL = entry	Rs. ~0	Part of 9%
TRAIL SL — Lock20	Price declines 40% from entry → SL = 80% ep	Rs.+300–1,500	Part of 9%
TRAIL SL — Ride	Price declines 60%+ → SL trails at 95% of max	Rs.+large	Part of 9%
EOD EXIT	Time ≥ 15:20:00 — force close regardless	Rs. ±variable	20.7%
HARD SL	Option price doubles (ep × 2.0) — immediate exit	Rs.–4K to –17K	6.8%

Trailing Stop-Loss Mechanics

Entry = Rs.100	Sell 1 CE or PE at Rs.100
Target = Rs.70	Price falls to Rs.70 → exit, profit = Rs.30 per unit
Trail 1: decline 25%	Price falls to Rs.75 → SL moves to Rs.100 (breakeven locked)
Trail 2: decline 40%	Price falls to Rs.60 → SL moves to Rs.80 (20% locked)
Trail 3: decline 60%	Price falls to Rs.40 → SL trails at 95% of max gain
Hard SL = Rs.200	Price rises to Rs.200 → immediate exit, full loss capped

5-year exit distribution: Target 63.5% · Trail SL 9.0% · EOD 20.7% · Hard SL 6.8%

Conviction Scoring — Lot Sizing Framework

For base agents (THOR, HULK, IRON MAN, CAPTAIN), position size is determined by a **7-feature conviction score** computed from previous-day data. Higher conviction = more lots = amplified P&L; when the trade is correct.

Feature	Condition for 1 Point	Why It Matters
VIX OK	India VIX < 20-day MA of VIX	Low fear environment favors premium sellers
CPR Trend	Prev close on correct side of CPR	Prior day momentum confirms direction
Consecutive	2 consecutive days close aligned	Multi-day momentum adds conviction
Gap Aligned	Today's open gaps in trade direction	Gap = strong institutional intent
DTE Sweet Spot	Days to expiry: 3 to 5	Theta acceleration zone — max time decay
CPR Narrow	CPR width 0.10%–0.20% of spot	Narrow CPR signals trending day
CPR Directional	CPR midpoint trending in trade direction	Macro CPR slope confirms setup

Score to Lot Size Mapping

Score	Base Lots	Inside CPR?	Final Lots	Meaning
0 – 1	1	Any	1	Low conviction — minimum exposure
2 – 3	2	No	2	Moderate conviction — standard size
2 – 3	2	Yes	1	Inside CPR penalty (–1 lot)
4 – 7	3	No	3	High conviction — full position
4 – 7	3	Yes	2	Inside CPR reduces to 2
Score = 6	—	—	**SKIP**	Score==6 excluded (historically adverse)
BLACK WIDOW	2	N/A	2	Fixed 2-lot — WR 80.6% justifies
SPIDER-MAN	1	N/A	1	Fixed 1-lot
HAWKEYE	1	N/A	1	Fixed 1-lot

Live Execution Boosts (applied on top of conviction size)

Two additional +1 lot boosts are applied at execution time before every entry, on top of the conviction score. They are **not** part of the base backtest — they represent validated improvements from 148_combined_backtest (58 months).

Boost	Condition	Delta/Month	Logic
DTE ≤ 1	Trade day is expiry or day-before expiry	+Rs. 3,886	Theta decays fastest in last 24h — same premium, higher probability
Basis S3	|Futures basis| > 50 pts AND direction aligned	+ Rs. 1,311	Strong basis = carry conviction — PE sell when basis > 50, CE sell when < –50

Both boosts cap at 3 lots total. Combined (joint backtest): +Rs.4,734/mo (+16.2% over base).

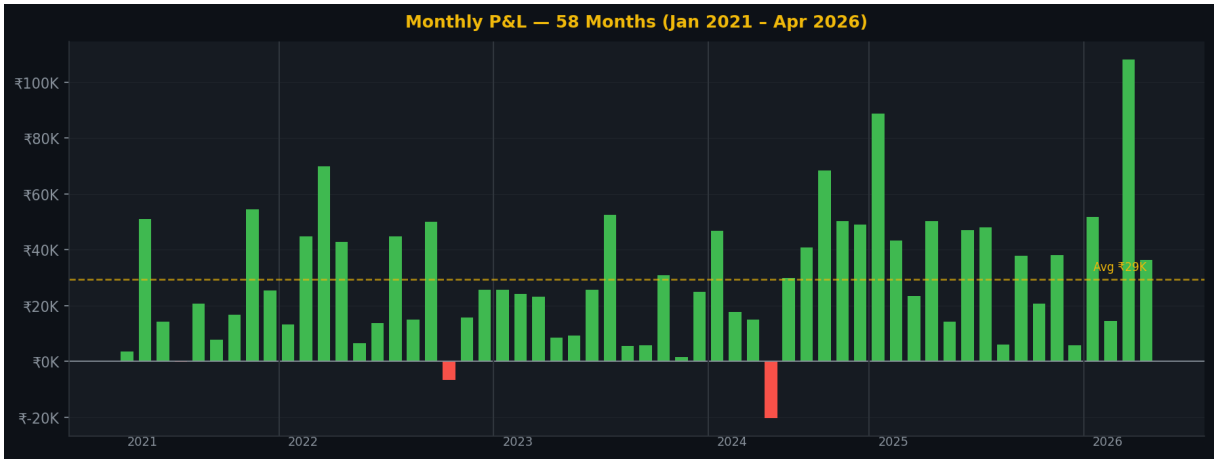
Detailed Performance — 5-Year Breakdown

Year-wise Performance

Year	Trades	Win Rate	Total P&L (Rs.)	Avg/Trade (Rs.)	vs Prior Year
2021	164	73.0%	193,434	1,179	
2022	207	70.0%	334,964	1,618	+73%
2023	202	72.0%	237,289	1,175	-29%
2024	138	77.0%	297,082	2,153	+25%
2025	177	81.0%	423,023	2,390	+42%
2026 *	61	77.0%	210,506	3,451	-50%
TOTAL	**949**	**74.5%**	**16,96,299**	**1,788**	**5yr compound**

* 2026 partial year — January through April only.

Monthly P&L; — All 58 Months



Green = positive month · Red = negative month · Gold dashed = monthly average (Rs.29,247). Negative months: 3 of 58 (5.2%)

Metric	Value
Total months	58
Positive months	55 (94.8%)
Negative months	3 (5.2%)
Average monthly P&L	Rs. 29,247
Best month	Rs. 1,08,030 (March 2026)
Worst month	Rs. –20,326 (July 2024)
Months > Rs.50,000	18 (31%)

Risk Management

Capital Requirements

Parameter	Value	Notes
Minimum capital	Rs. 5,00,000	For 1-lot base trades with adequate margin buffer
Margin per lot	Rs. ~50,000	NIFTY ATM option sell margin (approximate)
Max lots at once	3 lots	High-conviction base trades only
Max daily risk	Rs. ~17,000	1 hard SL on a 3-lot base trade
Monthly avg P&L	Rs. 29,247	58-month trailing average
Negative months	3 / 58	5.2% of months — extremely low
Worst single month	Rs. –20,326	July 2024 — 2 hard SL same week
Best single month	Rs. 1,08,030	March 2026
Return on capital	~33.9% annualized	Based on Rs.5L capital, 5yr avg Rs.1.70L/yr

Risk Control Mechanisms

Hard SL at 2×: Option can never lose more than 100% of entry premium. Maximum total loss on any single trade is capped.

1 Trade Per Day: A bad day impacts only 1 trade. No compounding of intraday losses. Capital protected by design.

Score Filter: Low-conviction days trade 1 lot — limiting daily risk exposure automatically.

Basis Filter: PE sells skipped when futures basis 50–100 pts. Avoids adverse premium structure.

IB Filter: CRT CE skipped if IB already expanded upward — avoids selling into confirmed uptrend.

Blank Day Split: Base agents and blank agents never overlap. Risk per day is always 1 strategy's single trade.

EOD Forced Exit: No overnight holding. Fresh slate every day. No gap risk.

Drawdown Profile

Metric	Value
Maximum Drawdown	Rs. 46,134 (2.93% of peak equity)
Worst DD Period	Jul 15–24, 2024 — 4 trades, 2 hard SL in same week
Recovery Time	Under 2 months in all DD episodes
DD > 5% of equity	0 occurrences in 5 years

Consecutive losses	Max 5 in a row (isolated to volatile weeks only)
DD > Rs.1,00,000	0 occurrences — hard cap from lot-size limits

Paper Trading Plan — Getting Started

Before going live, FIFTO recommends a **30-day paper trading phase** to validate signal detection, entry timing, and exit execution against live market data. Results are automatically logged to CSV — compare with backtest to confirm live-to-backtest alignment (expected: WR within ±5%, avg P&L; within ±20%).

Daily Operational Routine

08:55 AM	Connect broker API. Fetch NIFTY daily OHLC. Compute all pre-market levels and conviction score. Lock day
09:10 AM	Print day summary: all levels, nearest expiry, conviction score, expected agent for the day.
09:15 AM	Market open. Start real-time NIFTY spot WebSocket. IB tracking begins (tracks 09:15–09:45 range).
09:16 AM	Base agents (THOR/HULK/IRON MAN/CAPTAIN) go active. Monitor for zone entry signals.
09:46 AM	IB confirmed. SPIDER-MAN and BLACK WIDOW scanners activate (blank days only).
On signal	Fetch ATM option LTP. Log paper entry. Start option tick monitoring with automated trade manager.
During trade	Trailing SL updates on every tick — fully automated. No manual action required.
15:20 PM	Force EOD exit if still in trade. Log result to CSV.
15:30 PM	Print daily P&L summary. Compare with backtest benchmark.

Angel One SmartAPI — Data Requirements

When	What	API Method	Used For
08:55 AM	45-day NIFTY OHLC	getCandleData (ONE_DAY)	CPR, EMA20, PDH/PDL
09:15 AM	Futures LTP	ltpData()	Futures basis filter
09:15–15:20	NIFTY spot ticks	WebSocket (token 26000)	IB, 5M/15M candles
On signal	ATM option LTP	ltpData(NFO)	Entry price capture
On signal	Option ticks	WebSocket (NFO token)	SL/target monitoring
Pre-market	Instrument master	ScripMaster JSON	Option token lookup

System v1.1 — Validated Live Improvements

Three bias-free improvements verified against the full 58-month combined backtest (January 2021 – April 2026, 148_combined_backtest.py). All three use only **pre-market or real-time data** available at trade entry — zero look-ahead. Combined uplift verified in joint backtest: **+Rs.6,374/month (+21.8% over base Rs.29,247/month)**. Note: individual improvement figures below are standalone estimates; the joint backtest gives the true combined figure (Rs.35,621/mo) after accounting for 3-lot cap interactions between DTE and Basis boosts.

Improvement	Type	Standalone/Month	Notes
DTE ≤ 1 Lot Boost	Lot sizing	+Rs. 3,886	Add 1 lot on expiry / day-before
Basis S3 Lot Boost	Lot sizing	+Rs. 1,311	|Futures basis| > 50 pts, direction aligned
Contra Trade	New signal	+Rs. 1,640	Sell opposite option after hard_sl pullback
COMBINED (joint backtest)	**—**	**+Rs. 6,374**	**+21.8% vs base — verified in 148_combined_back**

1. DTE ≤ 1 Lot Boost

On **expiry day (DTE = 0)** and **the day before expiry (DTE = 1)**, one additional lot is added to the trade (capped at 3 lots total). Theta decay accelerates sharply in the final 24 hours — the same option premium collected decays faster, making each unit of risk proportionally more rewarding.

Metric	Value
Condition	DTE ≤ 1 (computed from nearest weekly expiry)
Action	+1 lot added (max 3 lots)
Trades affected	~15–20% of all trades fall on expiry or day-before
Backtest delta	+Rs. 3,886 / month (+Rs. 2,25,388 over 58 months)
Risk change	None — same hard SL %, larger absolute amount at risk

2. Futures Basis S3 Lot Boost

When the **NIFTY futures basis exceeds 50 points in magnitude AND is aligned with the trade direction**, one additional lot is added. A large positive basis (spot below futures) favours PE sellers — institutions are bidding futures up, reducing downside risk. A large negative basis favours CE sellers.

Metric	Value
Condition	|Futures basis| > 50 pts AND direction aligned
Direction rule	PE sell: basis > +50 | CE sell: basis < –50
Action	+1 lot added (max 3 lots)
Backtest delta	+Rs. 1,311 / month (+Rs. 76,038 over 58 months)
Basis fetch time	09:15 AM — computed once per day from live futures LTP

3. Contra Trade — Post Hard-SL Recovery Entry

When a trade exits via **hard_sl** (option doubles), the system immediately begins monitoring the NIFTY spot price. When spot **pulls back within 30 points of the spot price at the time of the hard_sl exit**, a new trade is entered in the **opposite direction** — the market has reversed, confirming the initial move was a false spike. Entry cutoff: 14:00.

Metric	Value
Trigger	Hard_sl exit — option premium doubled from entry
Entry condition	Spot pulls back to within 30 pts of hard_sl exit spot (≤ 14:00)
Direction	PE hard_sl → sell CE | CE hard_sl → sell PE
Strike	ATM at time of contra entry
Lots	1 lot (+ DTE / Basis boosts if applicable)
Exit rules	Identical to base trade: 30% target, 2× hard SL, trail SL, EOD
Historical stats	59 / 65 triggered (90.8%) | WR 91.5% | +Rs.1,640/month
Backtest delta	+Rs. 95,111 total over 58 months

Why contra works: A hard_sl means the market moved sharply against the trade. In most cases (91.5% historically) the sharp move is temporary — the spot reverts to the zone it spiked from. Selling the opposite option after the pullback captures this mean-reversion with the same mechanical exit rules, requiring zero human judgment.

BASE SYSTEM (v1.0)	v1.1 IMPROVEMENTS	COMBINED (v1.1)
Rs. 29,247 / month	**+Rs. 6,374 / month**	**Rs. 35,621 / month**

Quick Reference Card

	Agent	Zone	Opt	Lots	WR	5yr P&L	Day Type
T	THOR	Open-based zone	PE	1–3	74.0%	Rs.856,859	Base
H	HULK	Resistance zone	PE	1–3	88.0%	Rs.133,188	Base
I	IRON MAN	Upper resistance band	PE/CE	1–3	73.0%	Rs.143,107	Base
C	CAPTAIN	Prior session support	CE	1	61.0%	Rs.18,561	Base
S	SPIDER-MAN	False breakout reversal	CE	1	70.0%	Rs.74,935	Blank
W	BLACK WIDOW	Mean-reversion zone	PE	2	81.0%	Rs.307,346	Blank
H	HAWKEYE	Post-target re-entry	Same	1	71.0%	Rs.162,302	Base

Exit Cheat Sheet

Trigger	Action	Result
ep × 0.70	EXIT — Target hit	+30% of entry premium
Max decline ≥ 25%	Move SL to entry price	Breakeven locked
Max decline ≥ 40%	Move SL to ep × 0.80	20% gain locked
Max decline ≥ 60%	Trail SL at 95% of decline	Maximum profit locked
ep × 2.0 (price doubles)	EXIT — Hard SL	100% loss on entry
Time ≥ 15:20:00	EXIT — EOD forced exit	Whatever P&L is at 15:20
